COVID-19 Vaccines Toolkit

For more information:
Canada.ca/coronavirus

Information for Indigenous communities:
Canada.ca/coronavirus-info-indigenous

About this toolkit

COVID-19 is having a serious impact on First Nations, Inuit and Métis communities. Our top priority is the health and safety of all Canadians, including Indigenous peoples.

We have heard the concerns from First Nations, Inuit and Métis communities and organizations. We are aware that you are receiving enquiries from people who have questions about the vaccines and the measures to contain the virus.

This toolkit may help you answer some of those questions and direct people to the right sources of information.

We will update this toolkit regularly over the next few months. Check the updated date on the cover to be sure you are using the most recent one.

This toolkit:

- contains information and communication resources that you could share with your community on two topics:
 - COVID-19 vaccines
 - the importance of keeping up with public health measures
 - mental health resources
- complements information shared by local public health, community health directors and other trusted sources within your community.

Each community is unique in the way it shares information with its members. The advice and examples provided here have been developed with this in mind.

Each community may wish to customize the messages and strategies so they will be effective locally.

Sharing information with your community

These tips may be helpful:

1. Identify your audience

General messages about vaccines do raise awareness, but consider tailoring your messages for particular audiences, such as:

- Elders and seniors
- parents
- individuals who have chronic conditions, such as diabetes or asthma

COVID-19 Vaccines Toolkit

For more information:
Canada.ca/coronavirus

Information for Indigenous communities:
Canada.ca/coronavirus-info-indigenous

2. Identify spokespersons

You may also want to consider who is the most appropriate spokesperson for a particular message.

Local Indigenous leadership, Elders or health staff such as doctors or nurses are examples of trusted sources of information in communities.

There may be others, depending on the community.

3. Identify ways to share your message

Many Indigenous communities and organizations are active on social media with Facebook as the primary platform. Although social media can be effective, consider what works best in your community. You are the expert.

This could also include:

- posters
- home visits (if safe)
- telephone trees
- direct mail

4. Share often

For the most impact, messages should be shared multiple times in order for people to recognize them and act accordingly.

Consider sharing information more than once and with different messages on the same theme over a period of time.

Ultimately, your own experience in your community or organization will guide you as you decide how to plan your campaign. Keep in mind:

- the audience
- the spokesperson
- the message
- the best platform to deliver the message

Public service announcements for radio

Pre-recorded radio PSA on mental health

Here are some pre-recorded mental health radio PSAs. These were developed to raise awareness of mental health and promote the Hope for Wellness Help Line to First Nations, Métis and Inuit across Canada. The help line offers immediate support to all Indigenous Peoples and is available 24 hours a day, 7 days a week.

[Click HERE to download the English version recorded by James Jones \(Notorious Cree\).](#)

[Click HERE to download the French version recorded by the rapper Samian.](#)

Radio script

Here are three radio scripts that you may wish to use as is, or adjust for your community.

It could be read or recorded by someone in your community (such as an Elder, a Knowledge Keeper or a health professional) to use on local radio.

To personalize the messages, consider adding an introduction and sign off.

To find these scripts in Inuktitut (North-Baffin) click here : [COVID-19 Vaccine Myths – Radio scripts](#)

Script #1: Fertility & COVID-19 Vaccines – Dispelling Myths

For many Indigenous women and families, pregnancy and childbirth can be an empowering experience. But, deciding to get the COVID-19 vaccine while pregnant, or if you're thinking about having a baby, can be a difficult choice to make.

COVID-19 vaccines won't be harmful to you, or to your pregnancy, and will not prevent you from becoming pregnant, based on the most current data. But, if you get the virus while pregnant and are not vaccinated, it could seriously harm the health of you, and your baby.

Your health and safety are sacred, and so are those first special moments with your newborn. Getting the COVID-19 vaccine is one of the best ways to protect yourself, your baby, and your community

Script#2: COVID-19 Vaccines - Truth Behind Vaccine Development

Do you have questions about the COVID-19 vaccines? Are you worried they were developed too fast, and if they are safe?

Scientists have been developing the technology behind mRNA vaccines for years – even before the current COVID-19 pandemic. They’ve done lots of testing on the COVID-19 vaccines, without skipping any steps, and have passed every safety requirement from Health Canada.

Talk to a health care provider you trust. Learning about the COVID-19 vaccines – and following public health measures - is the safest way to protect ourselves, our Elders, and our youth, from the virus.

Sign off (if you wish)

“Together, we can do this. To get the facts about COVID-19 vaccines, please visit Canada dot c- a slash coronavirus dash info dash Indigenous, or call 1-833-784-4397.”

Script #3: COVID-19 Vaccines – Dispelling Myths about Vaccines affecting DNA

The pandemic has been a difficult time for many. It’s hard to know which facts about COVID-19 vaccines are true, and which aren’t – like, can the COVID-19 vaccine actually change our DNA?

The simple answer is no. The mRNA vaccines are safe and won’t change your DNA. The vaccines actually tell your body to create proteins that will make your immune system stronger to help fight the virus. It’s good to know the vaccines are safe and boost our immunity. It’s also good to get the facts from a trusted health care provider, such as a nurse or doctor, so we can make the safest choice for ourselves, for our Elders, and youth.

Sign off (if you wish)

Key message – COVID-19 for youth/young adults

Please note the Key Messages wording below can be adapted to better resonate with your target age group

Objective #1: Build confidence and trust in the available vaccines to increase uptake

KEY MESSAGES:

- The Pfizer-BioNTech COVID-19 vaccine has been tested and proven to be safe and effective for youth as young as 12 years old. ([link](#))
- Vaccines are safe and will help protect you, your family and your community from COVID-19.
- By getting a COVID-19 vaccine, you will help protect those who may be more likely to contract the virus, such as Elders and Knowledge Keepers within your family or community.
- By getting a COVID-19 vaccine, you will help protect your children and grandchildren.
- Getting vaccinated is your personal choice. Make an informed decision based on reliable sources of information, like the Government of Canada’s website Canada.ca/vaccines, or your local public health authority office.
- COVID-19 vaccines have been rigorously tested and then carefully reviewed by Health Canada experts. Only vaccines that are proven to be safe, effective and of high quality are authorized for use in Canada.
- COVID-19 vaccines were authorized quickly, but safely, in Canada. Here’s how: Health Canada had dedicated teams only reviewing one COVID-19 vaccine at a time and working 24/7. They looked at the same amount of data and using the same type of review as they would for any vaccine. ([link](#)).
- Similar to the regular flu vaccine, COVID-19 vaccines work by telling your body to build a defense to the virus. This defense will help you fight the COVID-19 infection if it enters your body in the future.
- Vaccine side effects are generally mild and only last a few days. Serious side effects, like anaphylactic reactions, are uncommon and closely watched for.
- Most vaccine side effects are a sign of your healthy immune system building a defense to the virus.
- A two-dose vaccine means you need to get vaccinated twice. The first dose triggers your body to start building protection, but the second dose is required to boost your immune system for the best protection.
- Wanting to protect your body and make informed choices is natural. There is no evidence that getting the vaccine will affect your ability to have children in the future ([link](#)), if anything it protects you now from COVID-19 and keeps you healthy.

COVID-19 Vaccines Toolkit

For more information:
Canada.ca/coronavirus

Information for Indigenous communities:
Canada.ca/coronavirus-info-indigenous

- For pregnant people, the risk of severe outcomes is much greater if you catch COVID-19 than the risks of a severe reaction after getting the vaccine. If you want to be vaccinated during your pregnancy, the National Advisory Committee on Immunization recommends you get an mRNA vaccine (Pfizer or Moderna). ([link](#))
- [The Canadian Society of Obstetrics and Gynecology \(SOGC\)](#), the [National Advisory Committee on Immunization](#) and public health experts all advise that pregnant and breastfeeding women be offered the COVID-19 vaccine. If you are pregnant, planning to become pregnant or are breastfeeding, speak to your health care provider about COVID-19 vaccines. ([link](#))

Objective #2: Increase knowledge of COVID-19 risks and adherence to public health measures

KEY MESSAGES:

- Risk of severe complications or even death are much greater if you catch COVID-19 than the risks of a severe reaction after getting the vaccine, especially with the new variants.
- More people need to be vaccinated before restrictions can be lifted. Continue following local public health advice and maintain individual protective measures whether or not you have been vaccinated to keep yourself, your family and your community safe.
- Especially with the variants of concern in circulation, limiting in-person interactions with people outside your immediate household, avoiding crowded places, wearing a mask and washing your hands frequently are still important, even after you get vaccinated.
- COVID-19 does not see age, especially the variants of concern. Protect yourself, get vaccinated.
- Even if you are young and healthy, vaccination is still an important step to get back to normal activities like playing sports, going to school and hanging out with friends.
- Variants of concern are mutations of the virus that cause COVID-19. Variants are still considered to be COVID-19, but just different versions of the original virus. Some can spread more quickly and easily than the original virus. The best way to protect yourself from COVID-19 variants is the same way you protect yourself from the original virus:
 - wear a multi-layered mask that fits well
 - wash your hands with soap and water often and for at least 20 seconds
 - minimize in-person interactions with people from outside your household
 - avoid closed spaces and crowded places
 - stay home if you feel sick
 - and get vaccinated

COVID-19 Vaccines Toolkit

For more information:
Canada.ca/coronavirus

Information for Indigenous communities:
Canada.ca/coronavirus-info-indigenous

- If you have tested positive for COVID-19 in the past, you can still get vaccinated.
- Being pregnant during the COVID-19 pandemic can be stressful. It's natural to worry. The Government of Canada is still learning how COVID-19 affects pregnancy. However, evidence shows that it's rare to pass COVID-19 to your baby during pregnancy and that the best way to protect you and your baby is vaccination. ([link](#))

Social media posts

Indigenous youth, COVID-19 shareables with creatives: [Social media posts for Indigenous youth](#)

You can visit our website for social media resources regarding COVID-19, including a Facebook frame! Click here: [COVID-19 resources for social media](#)

Here are examples of messages that you may wish to adapt for your own campaign.

You could also:

- record the radio scripts on a cell phone video to share on social media
- find additional subjects of interest in the Narrative section

Some of these messages have been translated into 17 Indigenous languages, click here to access them: [Social media messages](#)

Messages as of June 15, 2021

Message #1

Learn about the #COVID19 vaccines that have been approved in Canada: <https://www.canada.ca/en/health-canada/services/drugs-health-products/covid19-industry/drugs-vaccines-treatments/vaccines.html>

Message #2

Wondering if vaccines are safe? Watch this video: <https://www.canada.ca/en/public-health/services/video/vaccine-safety.html>

Message #3

All #COVID19 vaccines used in Canada go through many tests to make sure they are effective and safe. Find out more about the process: <https://www.canada.ca/en/health-canada/services/drugs-health-products/covid19-industry/drugs-vaccines-treatments/vaccines/development-approval-infographic.html>

Use of images

- All visuals, including photos, stock photography, video and live streams should respect provincial, territorial and federal health and safety guidelines with regards to COVID-19. This includes:
 - physical distancing
 - wearing a mask
 - other proper health precautions
- Avoid photos of people touching, shaking or holding hands. Photos that take place outdoors are preferable.
- For indoor photos, we recommend pictures of objects instead of people.
- If you are using visuals of a pre-pandemic situation, you may want to consider identifying them as such to avoid people mistaking it as a current visual.

COVID-19 vaccine narrative

Each community is unique and has its own specific needs and concerns. This is especially true for Indigenous communities. Below you will find key messages that you may wish to adapt for your own requirements.

Use these at your discretion, to:

- adjust the radio scripts we provided or to write your own
- create your own social media posts
- create a virtual Q&A meeting

... whatever suits you best.

Theme 1: COVID-19 is a health threat, please continue to observe public health measures

COVID-19 fatigue has set in and some have relaxed their attention to public health measures, which has given rise to increases in COVID-19 cases.

You may wish to provide a reminder of what to do and the reasons for doing so. Some examples:

- COVID-19 threatens the health of our people, our Elders, our knowledge keepers
- Please follow public health measures and if you must gather, please make sure you:
 - limit the size of the gathering to comply with local, provincial and territorial public health guidelines
 - maintain physical distancing at all times possible
 - wear a mask
 - avoid close contact (such as hugs, kisses and handshakes)
 - consider outdoor or virtual options
 - stay home if you are sick
- Please help spread the word and encourage your loved ones to practice safe behaviours
- Even though the COVID-19 vaccines are available, the virus is still a threat
- Until the COVID-19 vaccines have been given to a large part of the population to ensure collective immunity, it is important to keep following public health guidelines:
 - wash your hands

COVID-19 Vaccines Toolkit

For more information:
Canada.ca/coronavirus

Information for Indigenous communities:
Canada.ca/coronavirus-info-indigenous

- wear a mask
- physical distance from others
- stay home
- avoid gatherings
- get tested if you have symptoms

Theme 2: COVID-19 vaccines and Indigenous peoples

- Indigenous leaders have been and continue to work closely with the Government of Canada to address COVID-19. The COVID-19 vaccines complement traditional approaches to protect our Elders and the people most at risk.
- Traditional healing and modern medicine can work hand in hand.
- Indigenous traditions and knowledge systems are sources of strength, wisdom and guidance.

Thank you

We would like to thank you for using this toolkit and hope that you find it useful.

Your efforts in promoting public health advice and information related to the vaccines against COVID-19 have a significant impact on peoples' lives.

We recognize that each community is unique in the way it shares information with its members.

It's a collective effort. Together we can do this. Thank you.
